

1. Fetch all the details from the TODO api (<https://jsonplaceholder.typicode.com/todos>) and store the details with "**completed**": **true** to a new list by implementing List Comprehension and display the new list.
2. Create a simple menu driven application for a restaurant for their food menu
 1. Tea (Rs.7)
 2. Coffee (Rs.10)
 3. Masala Dosa (Rs.50)
 4. View Bill and Email

Take the order from the user and once they have completed their order **press 4** and then display the total amount for their order. Also collect user email id and send the total order amount to their email id.

Note : Create a repository in Github and do the versioning
